

Cookie Cats A/B Test — Go/No-Go Recommendation

Moving the progression gate 30 → 40 · 90,188 users · first 14 days · CRISP-DM Phase 6

RECOMMENDATION

NO-GO

Keep the gate at level 30. Do not roll out gate 40.

Confidence > 95%

D7 retention drops **−0.82pp (−4.3%)**

$p = 0.0016$ · statistically significant, beyond the Bonferroni threshold → gate_40 reduces day-7 returning users.

Engagement: the two groups are equal

median 17 vs 16 rounds · $p = 0.051$ · bootstrap CI contains 0 → no upside to trade for.

The harm hits exactly the core-user group

medium −0.63pp, heavy −1.27pp; light virtually unchanged → moving the gate breaks the comeback-habit of valuable players.

≈ **\$2,454**

per month / 100K installs

Business impact (proxy, ARPDAU benchmark \$0.10): ~818 D7 users lost/month per 100K installs ≈ \$2,454/month ≈ \$29,448/year — linear with traffic. D7 retention is used as a stickiness/LTV proxy, not directly measured revenue.
